*single & double-sided portable lightboxes*

## BRIGHT enough to ensure you stand out

## yet LIGHT enough to carry

### easy to insert graphic panels

## easy tool-less assembly

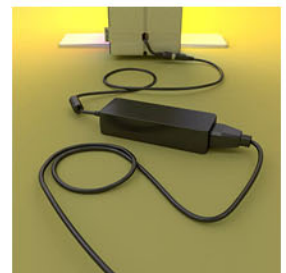

ILLUMINATOR parts are made from high-quality opaque ABS plastic with UL, CE certification & class V0 plastic fire prevention. ABS is light weight and offers high stability with long lifespan giving you an easy to use display which can be assembled again & again.

The LED profiles already come with an integrated LED module for quick & easy setup.

As the parts are modular, it is even possible to join stands together to make an even larger display when needed!!

The internal voltage of the frame is 24V DC with a power consumption of approx 27W per m<sup>2</sup>

Our ILLUMINATOR power supply is ready for use worldwide and can use input voltages between 110V and 230V.

For use with non-European earthed sockets, we recommend our appliance plugs, with which you can convert your power supply unit for EU, UK, Australia or the USA.

# Focus illuminator

*BRIGHT enough to ensure you stand out ~ yet LIGHT enough to be portable!*

*2 handy portable storage cases supplied to transport all components for each 3m x 2.5m lightbox wall*

*For smaller spaces re-create as a 1m or 2m wide display simply adding a new fabric panel*
